Subject: DIS-16-03, Radioactive Waste Management and Decommissioning

Hello,

My comment on DIS-16-03, Radioactive Waste Management and Decommissioning.

RE: "Making "reduce, reuse, recycle" a requirement."

Such a requirement would need some enforcement, so that frivolous blockage of implementing it can be overridden.

For example, whereas Bruce Power's refurbishment project aimed to recycle the old steam generators, by sending them to a specialist in Sweden, the scheme foundered due to organised opposition to the shipment, despite having obtained CNSC approval.

How does the CNSC propose to deal with such problems in the future, if "reduce, reuse, recycle" is made a stronger requirement ?

Thank you.

Jaro Franta
