To- CNSC,

I am very disturbed to learn that Ontario Power Generation is requesting CNSC to continue the nuclear power plant in Pickering until 2024 when it is supposed to be shutting down in 2020. It creates a fear for me as I live very close to Pickering in Scarborough and the radiation that it can cause to many people including me who are living in the GTA. After all, Canada has 20% of the world's fresh water and the whole country's energy can be produced by it when smaller countries like Brazil, India, Sri Lanka, Nigeria and many more countries use hydroelectricity. I hope as a citizen of this country, we can live in a healthier environment without being feared about health hazards which can be caused by nuclear power plants. This radioactive nuclear power plant can increase cancer in Canada and put many more people's lives in risk. I strongly believe that it is now the time to shut down the nuclear power plant in Pickering as it is already very late. I truly hope CNSC considers the citizens' and future generations' health of this country and make a decision to completely shut down the nuclear power plant in Pickering.

Sincerely,  
Jayanthini Jegatheswaran
